Meeting and Events Booking Solution

Rendezvous (RDZ) is a cloud-based diary management system for our meeting and event space, with advanced multi-diary capabilities giving our team a highly visual view of all our available space.

RDZ has been designed to easily manage all bookings from the diary – information held by the system can be accessed and amended with a single click. It's also easy to add additional rooms, AV or catering as well as notes, and then complete your booking directly from the diary screen.

What does this mean for us:

Ease of use – view availability and status of rooms from across our portfolio quickly and easily from a single diary view.

Date navigation – it's intuitive to get around the diary, by day, month or year, - whichever we prefer.

Waitlist management – its easy for us to gain easy access to our wait list, enabling faster decision making and maximising room occupancy and sales opportunities.

Integration with Mews – All event bookings will push through to Mews for billing, and bedroom reservations can be made in RDZ without the need to jump onto Mews. Our customer information with flow seamlessly between CRM, RDZ and Mews.

Full Integration with Dynamics 365 – we have a two-way integration with Dynamics 365, so no matter where the booking starts we will capture the best customer information.

""Ease of use. Intuitive. Well laid out. Very logical once you start using. Lots more options for end-users".

"Software is flexible and support is amazing. Simple or Complex bookings system is intuitive".

"Ability to book rooms across multiple locations with different meeting requirements is a real plus".
